Where Wise Faces Pricing Pressure

UK outbound remittances | 2022-2025 | Historical pricing benchmark

Executive takeaway: Across 98 like-for-like historical Wise observations, Wise exceeded the median matched competitor price in most comparisons across Bangladesh, Nepal and Pakistan. Bangladesh had the largest observed median gap, but exchange-rate methodology requires careful validation.

PRICING GAPS BY DESTINATION

Median gaps are unadjusted; a positive gap means Wise was more expensive.

KEY FINDINGS

Destination	Matched quotes	Median gap	Wise costlier
Bangladesh	32	+1.415 pp	81.3%
Pakistan	33	+0.770 pp	63.6%
Nepal	33	+0.365 pp	81.8%

WHAT THE ANALYSIS REVEALS

Bangladesh: Median gap decreases from +1.415 pp to +0.940 pp after excluding flagged anomalies. Source notes cite alternative FX benchmarks and an incoming-transfer subsidy, limiting direct comparability.

Nepal: Wise was costlier in 81.8% of matched observations, although the median gap was relatively small (+0.365 pp).

Pakistan: Under stricter matching (at least two competitors, anomalies excluded), the median gap narrows to +0.470 pp across 27 observations.

RECOMMENDED ACTIONS

1. Validate Bangladesh FX benchmarks and subsidy treatment before drawing pricing conclusions.
2. Investigate payment-method differences, particularly card-funded transfers.
3. Repeat comparisons with current, equivalent transfer quotes before commercial decisions.

METHOD & REPRODUCIBILITY

98 Wise quotes matched by destination, quarter, payment method and payout method; competitor median used as benchmark. Robust anomaly screening and sensitivity checks applied. Findings reflect sampled historical quotes, not live prices or causal effects.
